Open to Bengaluru / Hyderabad / Pune / NCR / Remote

Summary

Software engineer with 3 years building and operating production commerce systems, promoted through four levels at the same company and now leading a small engineering team. Architected a multi-tenant platform serving 5 international markets across 5 currencies, designed a headless React + GraphQL commerce layer, and shipped a product to two independent public marketplaces where it has held a 5.0 rating for two years. Recent work spans LLM-driven backend automation and real-time 3D/WebGL rendering.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS/SCSS

Systems & Architecture: Multi-tenant architecture, API design (REST, GraphQL), event-driven integration via webhooks, data modelling, caching, schema normalisation, third-party service integration, platform migration, performance optimisation

Backend & Data: Node.js, Express, GraphQL, REST, OpenAPI, MongoDB, MySQL, NoSQL, OAuth, session management, typed SDK design

Frontend: React, Next.js, Vue.js, Tailwind CSS, Core Web Vitals, code splitting, lazy loading, WCAG accessibility, Figma-to-production

AI & Automation: LLM API integration, prompt pipelines, automated catalog enrichment, recommendation systems, unattended workflow automation

3D & Real-Time Graphics: Three.js, React Three Fiber, WebGL, GLTF/GLB pipelines, CAD ingestion, PBR materials, browser AR with camera tracking, offline render pipeline

Commerce Platform: Headless commerce (React + Storefront API + GraphQL), Shopify Hydrogen, Admin GraphQL API, Shopify Functions, checkout extensibility, app development (Remix, App Bridge, Polaris), multi-store operations

Practice: Git, code review, CI/CD, Vercel, technical documentation, architecture decision-making, mentoring

Experience

The Diamond Port

Surat, India

Oct 2023 – Present | Promoted four times: Intern → Frontend Engineer → Full Stack Developer → Senior Engineer

Senior Engineer, Commerce Platform & AI

Apr 2026 – Present

- **Lead a small engineering team** across the commerce, AI and 3D tracks — setting technical direction and architecture, running code review, defining release and QA standards, and onboarding and mentoring engineers into the codebase
- **Architected and operate a multi-tenant commerce platform** serving 5 international markets (AU, UK, DE, US, IN) across 5 currencies, each with independent catalog, pricing, tax and fulfilment configuration, unified behind a shared component library and a single analytics layer
- **Designed and shipped LLM-based automation services** in Node.js over the platform's GraphQL Admin API for inventory synchronisation, order reporting and catalog enrichment across all 5 storefronts, eliminating roughly 780 engineer-hours per year of manual operations
- **Own a publicly distributed commerce application end to end** (Remix, Node.js, React, App Bridge, OAuth, session storage) backed by GraphQL and webhook-driven event handling — architecture, release, monitoring and support across two years in market
- **Delivered server-side checkout customisation** through sandboxed serverless functions distributed via the app — discount logic, cart and checkout validation, delivery and payment customisation, cart transformation
- **Led a vendor-deadline platform migration** ahead of an Aug 2026 cutoff: audited legacy checkout scripts, mapped each behaviour to a supported extension point, and rebuilt them with zero customer-facing regression

Full Stack Developer

Apr 2025 – Mar 2026

- **Built and launched the 5-market storefront estate from scratch** — ringsofaustralia.com.au (AUD), ringsofuk.com (GBP), ringsofgermany.com (EUR), preciouscarbon.com (USD), premexa.in (INR) — choosing separate stores over a single multi-market instance because each market carries its own legal entity and inventory, offsetting the duplicated deploys with a shared section library
- **Designed a headless commerce architecture** (React + Storefront API + GraphQL) decoupling the frontend from theme constraints, cutting frontend delivery time roughly 3x versus traditional theme development

- **Built a multi-supplier B2B aggregation platform** (Next.js, Tailwind) over a 2,000+ SKU catalog ingested from heterogeneous supplier APIs across 6 countries — schema normalisation, caching, multi-currency pricing and white-label iframe distribution — replacing a fully manual ordering process and cutting order processing time by approximately 70%
- **Executed three platform migrations** from Magento, WooCommerce and BigCommerce: catalog, customer and order data mapping, metafield schema modelling, URL and 301 redirect strategy, and post-launch verification
- **Integrated 10+ third-party payment, logistics and analytics services** into a single unified data layer via REST and GraphQL with webhook-driven state reconciliation
- Initiated and led the 3D commerce track — Three.js configurators, GLTF/GLB asset pipelines and CAD ingestion — which became the i3dStudio platform

Frontend Engineer (React & Vue)

Apr 2024 – Mar 2025

- **Built a product configurator shipped to two independent public marketplaces** — the Shopify App Store (Jul 2024, \$1,499 one-time, rated 5.0/5, taken through platform review personally) and the WordPress.org plugin directory with WooCommerce integration — and have owned every release since
- **Designed the shared component library adopted as the company UI standard**, cutting average feature build time by approximately 30% across concurrently running projects
- **Delivered scroll-driven motion systems on production sites** — GSAP with ScrollTrigger on radiantsunenergy.com, AOS with custom scroll-reveal on thechiku.in and eye.hi-labsolution.org — tuned to keep animation off the critical rendering path and hold Core Web Vitals on mobile
- Shipped production React, Vue.js and ES6+ interfaces from Figma across international markets, owning responsive behaviour and cross-browser verification

Software Engineering Intern

Oct 2023 – Mar 2024

- Shipped production React components and REST integrations into live storefronts within the first month, working in a Git pull-request and code-review workflow

Selected Projects

i3dStudio — CAD-to-Web 3D Viewer & AR Platform

i3dstudio.vercel.app

- Built the full product: converts 8 CAD and mesh formats (3DM, GLB, GLTF, STL, OBJ, FBX, DAE, PLY) into photoreal interactive browser 3D viewers with physically-based refraction and dispersion, studio lighting, 115+ PBR materials and 100+ starter models
- Wrote the import analyser that auto-detects material regions on upload, turning a raw CAD file into a configurable product without manual tagging
- Shipped browser AR in three modes — live camera hand tracking, photo upload and model preview — with US, UK and EU sizing estimation
- Distributed as domain-locked iframe embeds plus a REST API, typed SDK and OpenAPI spec; built the offline 4K render pipeline, metered by a credit system across four billing tiers

Ring Configurator — Shipped to Two Public Marketplaces

apps.shopify.com/tdp-ring-builder

- A single configurator codebase running on two different host platforms — live on the Shopify App Store since Jul 2024 and on WordPress.org with WooCommerce integration
- Merges physical and virtual inventory into one buyer flow with real-time supplier feed integration, configurable markup rules, engraving options and automated order routing

AI Commerce Automation

internal platform

- Node.js and LLM pipelines over a GraphQL commerce API for inventory sync, order reporting and catalog enrichment, running unattended across 5 storefronts; currently extending into an AI-driven product recommendation engine

Education

Master of Computer Applications — Artificial Intelligence & Machine Learning

Jun 2024 – May 2026

Parul University | Grade A | Coursework: Data Structures & Algorithms, Distributed Systems, DBMS, Operating Systems, Machine Learning | Completed while working full time

Bachelor of Computer Applications

Jun 2021 – Apr 2024

Veer Narmad South Gujarat University | Grade A
